Affordable Housing Project

Draft Site Plan

JAMS Design Group

Leahy Project Area 1

Each unit will have 3 rooms the same size as the red box, which is about 12 by 18.5 feet. Two will be bedrooms and one will be the bathroom. One floor of the complex will be about 24,397.8 ft². We plan to have 3 levels. The total floor area available is 73,193.4 ft². We are able to have 11 units on each floor meaning there will be a total 33 units.

There will be a playground and basketball court. In the corner of the building will be a trash chute for people to throw away trash and a pathway so the bins can be dragged out to the street. We also plan to have the rooftop to have solar panels with optimal sun time and to have community gardens.

Leahy Project Office + Parking Lot

We plan to move the existing toolshop for the housing authority to be moved to the MPR which will split the MPR in half as they have said that the MPR is larger than they currently need. This also allows easy access from parking to the new housing complexes.

We are able to fit 35 parking spaces with seven of them being accessible spaces that are able to accommodate a van.

Leahy Project Area 2 - Non-residential use for parking.
